

CRBL: Installation Guide

Taine J. Rossini

Version 1.0.0.

1

The `makefile` assumes that the user has already installed the `equilibrium-c` library in their home directory. If not, it can be installed as follows,

```
cd ~
git clone https://github.com/uqngibbo/equilibrium-c/
```

2

Additionally, the following paths are used in the `makefile`, if yours are different, please edit the `makefile` accordingly. It is assumed that the user has already appended the `.bashrc` file according to the instructions in the `gdtk` installation guide.

```
INSTALL_DIR ?= $(DGD)
MAIN_DIR := $(DGD_REPO)
EQC_MAIN_DIR = $(HOME)/equilibrium-c/
```

3

It is recommended to clean the `gdtk/src/gas` library before building.

```
cd $DGD_REPO/src/gas
make clean
```

4

`crbl` can then be built and installed by running the following commands,

```
cd $DGD_REPO/examples/crbl
make install
```
